Latest version online: github.com/25006675-png/Island_life/blob/main/USER_GUIDE.md

Island Life — User Guide

Island Life turns a student's timetable and feelings into a floating 3D island. A week that is heavy *for you* makes the island sit lower in the sky, while recent mood check-ins shape its weather. This guide provides a simple route through the main experience.

Before you begin

- **App:** https://island-life.onrender.com/ (opens the welcome page first)
- **Instant demo:** https://island-life.onrender.com/?enter=demo (skips the welcome page and goes straight into the demo sky)
- **Recommended browser:** the latest Chrome or Edge on a laptop or desktop, with the window full-screen. A phone works too; see On a phone.
- **Suggested test time:** about 20 minutes: 5–10 minutes for Blomy's guided tour, then 10–12 minutes for the steps below. To go straight to the steps, press **Skip** on the tour.
- Please allow up to one minute for the 3D world to load on the first visit.
- No account, notification or calendar permission is required for the demo route. The tour's golden-window step asks for a photo: allow the camera, or choose any photo from your device instead. To leave it out, close the gold banner with ×.
- **Sound:** gentle music and sound effects start after your first click. To mute, open the ☷ **Menu** at the top right and turn off **Sound on**.
- **Good to know:** the demo's clock opens in the evening, after the day's activities have passed. Today's blocks therefore read "did it happen?" in the Planner. This is expected.
- **Found a bug or issue?** Please report it on GitHub; see Report a bug or issue.

Choose a route

Route	Best for	Data used
Demo island — recommended first	Seeing every important feature quickly	Preloaded fictional data for Alex and four friends; changes remain in this browser only
Signed-in island	Testing accounts, persistence, private data, invitations, Google Calendar and notifications	A Supabase account and data created by the judge

Route A — recommended 10-minute demo

1. Enter Alex's demo sky

Open the instant demo link. Alternatively, open the main app and watch a star whale carry Blomy, the gardener, to the pier (or press **Skip** at the top right). Then press **Come ashore** and select **Try the demo island** under the sign-in card.

Wait until the floating islands appear with the message "Welcome to the demo sky. This is Alex's island, with four friends nearby." Blomy then starts a guided tour in three short chapters, one after the other. Most steps wait until you have done what she asks, and a dot under her words shows how far you are. You can press **Skip** at any point.

What the tour asks you to do:

1. **The demo sky.** Press **Exam week** and watch Alex's island sink, then **A rough few days** for cloud and rain, then **Back to this evening**. These buttons are in Blomy's box.
2. **Your island.**
   - Tap **My island**, then hold `W A S D` to walk.
   - Blomy walks you to the flower by the gate: pick a feeling.
   - Open the **Planner** and press **OK, plant it** for a practice tree. Blomy walks you to it: press **Done** on its card. She waters it, and the fairy asks how draining it was.
   - Open and close **Your balance**.
   - Press **Ring it** to open a golden window, then **Share this moment** and take or choose a photo. It hangs in gold on the carousel.
   - Last, a sample invite window shows how friends join a sky. Press **Close**.
3. **Friends.**
   - Tap **The gathering Island**, open the task board and **Join** and **Mark done** its practice task.
   - Blomy walks you to the carousel, then onto a bridge: press **Go** to cross.
   - At the friend's gate, **Write** a note.

The practice tree and practice task are not kept. To see the tour again later, open the **☷ icon** and select **Show the guide again**.

Expected result: six labelled islands appear in one shared sky: **My island** (Alex's), **Ben's**, **Chen's**, **Dara's** and **Eli's island**, around **The gathering Island** in the middle. Alex's sample timetable, mood history and friends are already loaded.

2. See how workload changes the island

1. Open the settings panel with the **☷ icon** at the top right (its tooltip reads "Tune the world"). The panel's heading is **Make it your evening**.
2. Scroll down inside the panel to **Try the demo week**.
3. Select **Exam week** and observe the island sink. The **At a glance** card at the bottom left shows "38 m below" and the sky becomes **Drizzle**.
4. Select **A light week** and observe it float to 38 m above the gathering island, with a **Clear** sky.
5. Select **A rough few days** and observe rain appear. The island sits 8 m below: the load is only a little above usual, but the feelings are heavy.
6. Select **Back to this evening** to restore the original sample.

Each scenario sets a fixed height. **Back to this evening** returns to what Alex's own week says, and that depends on the day you open the demo, because the sample week is laid around the real current week. Late in the week Alex's island already sits low (on a Sunday about 26 m below), so the difference from **Exam week** is smaller, and **A rough few days** may even sit higher than this evening.

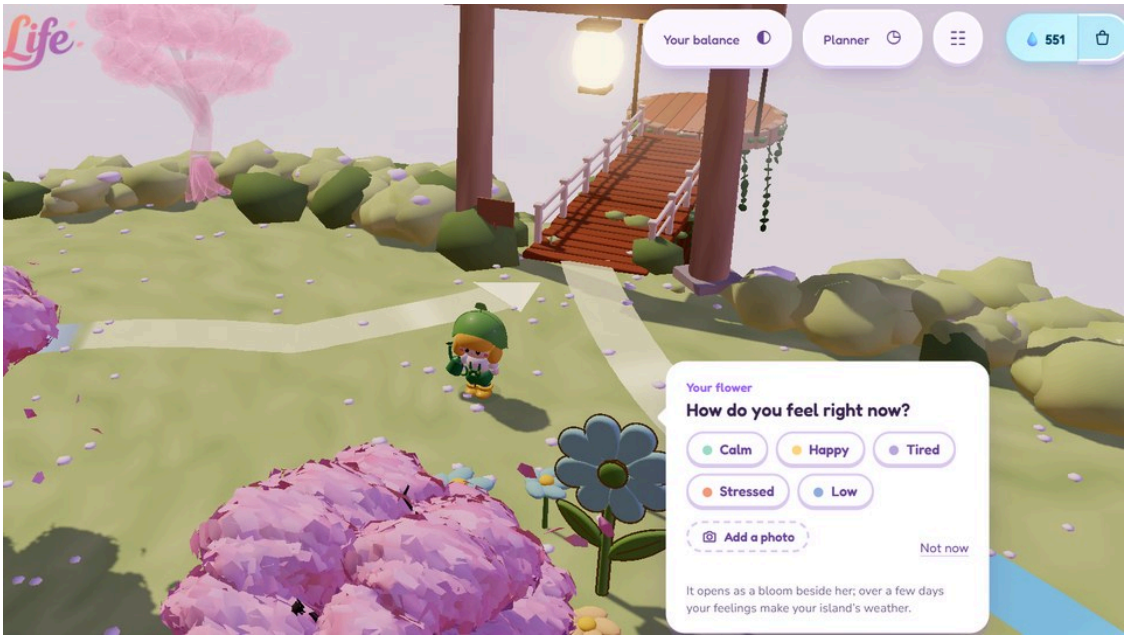

Tip: press **Sky view** at the bottom to watch the island move. When you are walking on the island it is harder to see it sink.

What this demonstrates: island height represents workload compared with the student's own normal week, and weather represents the recent mood trend. Workload and mood are deliberately kept separate.

3. Tell your flower how you feel

1. Go to **My island**: select its label in the sky view, or press **Take a walk** at the bottom.
2. A flower grows just inside your gate, to the left of the path from the pier. Walk up to her, tap her (a small "How do you feel?" tag rides on her face), or press `T`.
3. She asks **How do you feel right now?** Choose **Calm**, **Happy**, **Tired**, **Stressed** or **Low**. **Add a photo** is optional, and **Not now** closes her question.
4. Look for the message "A calm bloom opens beside your flower." and, in the **At a glance** card, the updated feeling and sky.

Expected result: the check-in is recorded immediately. One check-in opens a small bloom in that feeling's colour in the bed around her and colours her petals (the bed keeps the last seven days); several recent check-ins gradually change the island's weather. Afterwards she rests for half an hour: her tag then reads "Zzz… check in again in … min".

4. Finish an activity, and meet the fairy

1. Select **Planner**. The **Day** view lists today's activities, each with **Done** and **Let go**.
2. Press **Done** on one of them, for example **Slow breakfast**. Its tree takes root on your island at once.
3. Close the planner. A small fairy flies out of that tree and asks **How draining was it?** Choose **Light**, **Okay** or **Draining** (or **Not now**).
4. Blomy says what the island learned. The answer also shows on that block's row in the Planner.

You can also finish an activity on the island itself: walk along the coloured path until a block's card appears, and press **Done**. Blomy then walks over with her watering can and waters the glass tree until it takes root, before the fairy comes out.

What this demonstrates: finishing is always a deliberate tap, never a timer. The fairy's one question teaches the island what each kind of activity costs this student, which is what "heavy *for you*" means. **Your balance** shows what it has learned, and friends never see these answers.

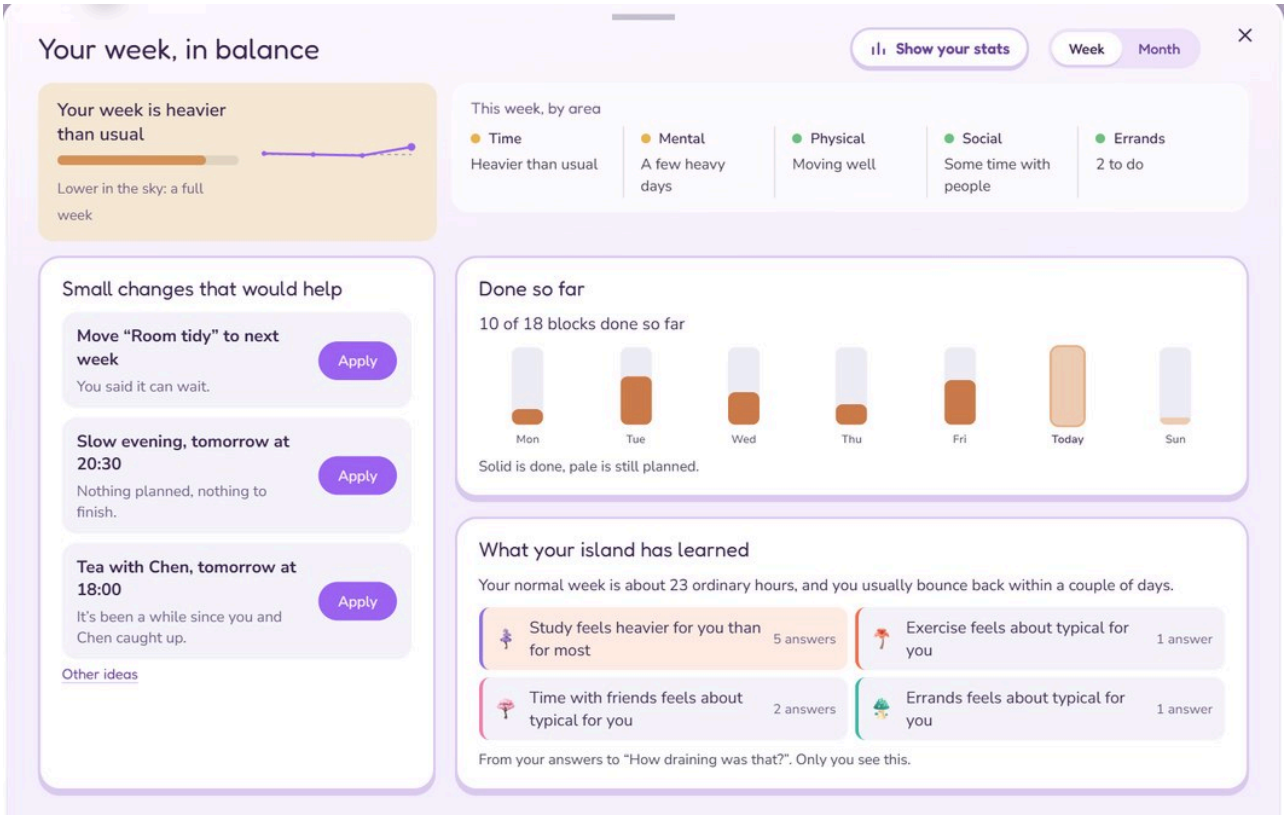

5. Inspect and edit the planner

1. Select **Planner**.
2. Switch between **Day**, **Week** and **Month** to inspect Alex's sample schedule. The bar under the tabs says how full the week is for Alex, and each day is marked, for example "Today: heavy for you".
3. Select **+ Add a block**.
4. Enter a title (**What**), then choose the **Day**, **Starts**, **For** (duration) and **Kind**. **Friends see** controls how much your friends can see: *Kind and size only*, *Everything*, or *Nothing*. You can also tick **Repeats every week** and **Can wait if the week gets full**.
5. Select **Save**. A message says the block "is on your plan."
6. Switch to **Week** view and confirm that the new block is shown. There you can also drag on empty time to add a block, drag a block to move it, or drag its lower edge to resize it.

Each activity kind has its own tree species. **Done** makes the tree take root in colour; **Let go** makes it drift away without punishment, and it can be brought back from the planner.

6. Test active rebalancing

1. Select **Your balance**. The sheet is titled **Your week, in balance**.
2. Review how full the week is, **This week, by area** (Time, Mental, Physical, Social, Errands), **Done so far** and **What your island has learned**. Press **Show your stats** for **Where your time goes** and **How you've felt**, then **Back to what you can change**.
3. Under **Small changes that would help**, apply a suggestion with **Apply**, for example **Add a slow evening tomorrow, 20:30** or **Invite Ben for a walk this Saturday**.
4. Confirm that the button changes to **Done ✓** and that a message appears, such as "Walk with Ben added for Saturday. Your bridges warm a little."
5. Reopen **Planner** and confirm that the suggested block was added or moved.

The gardener makes the same kind of offer on her own. When you arrive home on **My island**, Blomy asks you about one idea, for example "Your week looks heavy. Want me to move "Room tidy" to next week?" or "How about a slow evening tomorrow at 20:30?". The buttons answer her:

- **Yes, move it** or **Yes, add it** does exactly what she asked, at the free time she named.
- **Something else?** brings her next idea.
- **Not now** closes the card. **Why?** opens Your balance.

Notes:

- A suggestion that adds an activity also adds load, so the island may sit a little lower afterwards. The point is that the student chooses what to do about it.
- **Invite [friend] for a walk** puts a walk on your own plan and warms the bridge to that friend. It does not message the friend. To send a message, leave a note at their gate (see step 7).

- To undo a suggestion, open the Planner and press **Let go** on the block.

What this demonstrates: the app does not merely display stress. Its recommendations make a real change to the student's plan, nothing lands on the plan until the student taps it, and the change is reversible.

7. Explore the social and 3D experience

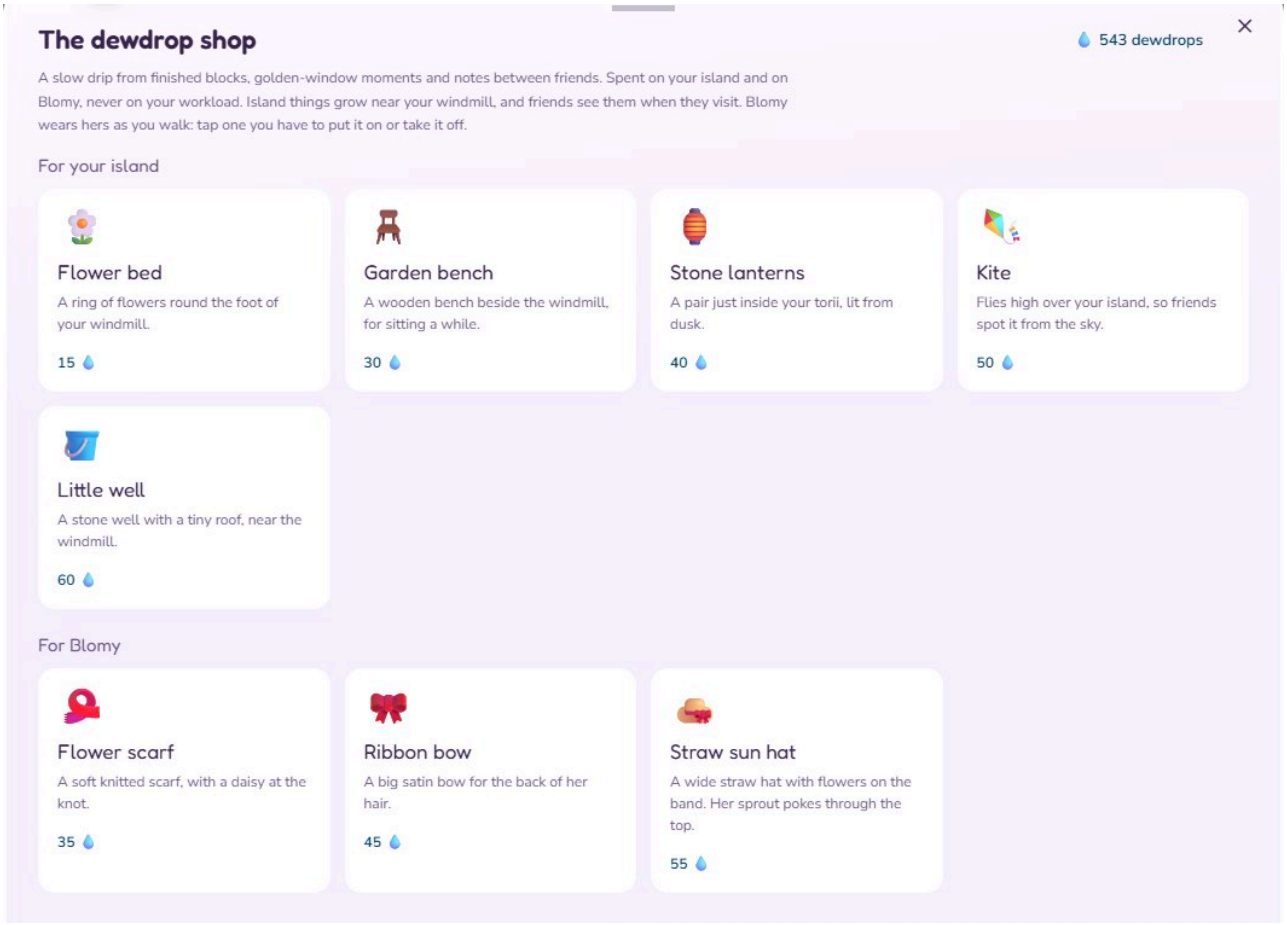

1. Close any open panel and press **Sky view**, then choose another person's island label (for example **Ben's island**).
2. Use the controls below to move around the islands. Walk onto a bridge and press **Go** to cross; arriving shows the island's name, its weather and its height in words.
3. At a friend's gate, a wooden sign lets you **Write** a short note, which hangs at their gate.
4. On **The gathering Island**, walk to the carousel by the pond and select **Open the album** to see today's photos and the golden window. The task board beside it (**View**) lists small tasks anyone in the sky can join.
5. Press **Schedule** at the bottom to lift today's path on your island into a readable timeline. Press it again to put it back.

Action	Control
Walk (hold the key)	`W A S D` or arrow keys
Run	`Shift`
Jump	`Space`
Talk to your flower	`T` (on your own island)
Turn	`Q` / `E`
Tilt camera	`R` / `F`
Zoom	`Z` / `X`
Return to sky view	`Esc`
Look around	Drag with the mouse or use touch

Friends can see another island's general height, weather, feeling blooms and permitted activity silhouettes, but not private timetable details. A block you mark *Nothing* is not sent to friends at all.

8. Decorate the island and dress Blomy

1. Select the bag icon beside the dewdrop count (💧) at the top right. The sheet is titled **The dewdrop shop**.
2. Under **For your island**, choose a decoration: **Flower bed** (15), **Garden bench** (30), **Stone lanterns** (40), **Kite** (50) or **Little well** (60). The demo starts with a few hundred dewdrops, so all are affordable.
3. Confirm with **Grow it for …** 💧.
4. Under **For Blomy**, choose **Flower scarf** (35), **Ribbon bow** (45) or **Straw sun hat** (55), and confirm with **Get it for …** 💧.

Expected result: dewdrops are deducted, the shop closes, and Blomy says a line about her purchase. A decoration takes you home to see it grow near the windmill at the centre of your island's clock-face path; friends see it when they visit. Something to wear goes on straight away (from the sky view, you are taken to the walk to see her); the sun hat takes the place of her leaf hat. Select a card you own to take it off or put it back on. Purchases are remembered in this browser in the demo. Dewdrops are earned through healthy participation such as finishing blocks, notes between friends and shared tasks; they cannot be purchased.

Route B — signed-in account and backend

Use this route after the demo. Select **Continue with Google** or **New here? Make your island**.

1. Open the main app, and press **Come ashore** or **Sign in to my island** (or **Skip** the arrival first).
2. Select **Continue with Google**, or create an account.
3. If this is a new account, choose **Start a new sky**. A friend's invite code can instead be entered under **Invite code from a friend**, then **Join their sky**. A sky holds up to five islands.
4. Select **Enter your island** if asked.

5. Blomy's tour starts at your own island. It is the demo tour's second chapter, with four differences:
   - A step explains why a new island floats high: an empty week is a light one.
   - The golden window it rings is a practice one. Your photo stays on your screen and is not shared.
   - She asks **Want your phone to ring when the real golden window opens?** Choose **Allow notifications** or **Not now**. Allow shows a sample "How are you?" notification straight away. (This step is left out if your browser can't show notifications, or you have already answered.)
   - She takes you to **Sky view** and asks you to tap a glass island to invite someone.

   The friends chapter waits until your first friend joins.
6. Add a planner block and refresh the page to confirm that it persists.
7. Check in with your flower and confirm that it appears in **Your balance**.
8. Open **Planner** → **Sync calendars**. Calendar access is optional. Outlook, iCloud and Canvas or Moodle are marked *Coming soon*.
   - **With Google Calendar:** select **Connect** beside **Google Calendar**. A window first explains that Google will show a warning, because Google is still reviewing the app. Select **I understand**, then on Google's screen tap **Advanced**, then **Go to Island Life**, tick the calendar box and press **Continue**. Your classes and plans arrive as blocks on your island. Once connected, **Sync now** fetches changes at once, and **Also send my Island Life plans to Google** turns on two-way sync.
   - **Without Google Calendar:** under the Google row, select **Try a sample week**. It puts 17 typical student plans on this week (lectures, a café shift, the gym, dinner with friends), two of them marked *can wait*, so the island, the planner and Your balance have a real week to work with. **Remove it** takes them all off again. Plans earlier in the week count as done straight away, as any past plan does, so add it early in the week to see the most.
9. Open the ☷ **icon** (the **Make it your evening** panel) to find **Your sky**: your invite code, **Copy invite link**, **Get notifications on this device**, and **Ask how I feel from** (see Notifications). To bring a friend in, follow Invite a friend to your sky below.
10. Use **Log out** at the bottom of the same panel when finished.

Invite a friend to your sky

A **sky** is you and up to four friends: five islands joined by bridges around The Gathering Island. Inviting needs a signed-in account (Route B); the demo sky has no invite. To try it on your own, use a private window or a second browser as the friend, with a second account.

You, the inviter:

1. Sign in and enter your island. If this is your first time, choose **Start a new sky**.
2. Open the ☷ **icon** at the top right. Under **Your sky** you will see how many islands are taken and your invite code, for example "1 of 5 islands. Invite code 7F3K9QXA."
3. Select **Copy invite link**. The message "Invite link copied. Send it to a friend." confirms it. If your browser blocks copying, a box shows the link to copy by hand.
4. Send the link to your friend in any chat app, or simply tell them the invite code.

Your friend:

1. Opens the invite link. It looks like `https://island-life.onrender.com/?join=7F3K9QXA` and opens the welcome page.
2. Watches the arrival or presses **Skip**, then **Come ashore**. Because they came from an invite, the card opens on **Make your island**.
3. Makes an account with a name, email and password (**Create your island**), or uses **Continue with Google**. A new email account may ask them to confirm by email first, then sign in.
4. On the next card, the invite code is already filled in under **Invite code from a friend**. They select **Join their sky**. If the box is empty, for example after confirming the email in a new tab, they type the code; capitals don't matter.
5. Their island opens in your sky, with its own bridge to The Gathering Island.

Back on your side: the glass island where they will live turns gold, with "Someone new joined your sky. Their island is glowing: tap it to welcome them." Tap it: the page reloads and their island grows in out of the glass, with their name. From then on their check-ins, notes, tasks, carousel photos and decorations reach you as they happen. You see their weather, the feeling blooms by their gate and their height, never their plans or hours.

Good to know:

- **One sky per account.** Someone who has already started or joined a sky opens their own sky when they sign in, and cannot join a second one with the same account.
- **Five islands at most.** When the sky is full, **Your sky** says "All five islands are taken." and the copy button disappears. Anyone who tries the code then sees "That sky already has five islands."
- **A wrong code** shows "No sky has that code. Check it with your friend."

Calendar privacy

- Island Life reads calendar titles and times only to create the student's private plan.
- Friends do not see private event titles.
- Two-way sync is off by default.
- If enabled, Island Life writes only to a separate calendar named **Island Life** and does not modify the user's original calendars.

Notifications

Notifications are optional and only sent after you turn them on, either from Blomy's question during the tour or with **Get notifications on this device** under **Your sky**. When on:

- **The golden window** rings the minute it opens. It opens once a day at a surprise time between 10:00 and 20:00, for everyone in the sky. Tapping the notification opens the camera.
- **How are you?** asks once a day, unless you have already checked in. It asks from the time chosen under **Ask how I feel from** in **Your sky** (12:00, 15:00, 17:00, 18:00, 19:00, 20:00 or 21:00; 20:00 unless you change it). Tapping it opens your flower's question.
- It never asks between 22:00 and 08:00, or while an activity on your plan is happening.
- **How draining was it?** is not a notification. The fairy asks it in the app when you finish something.

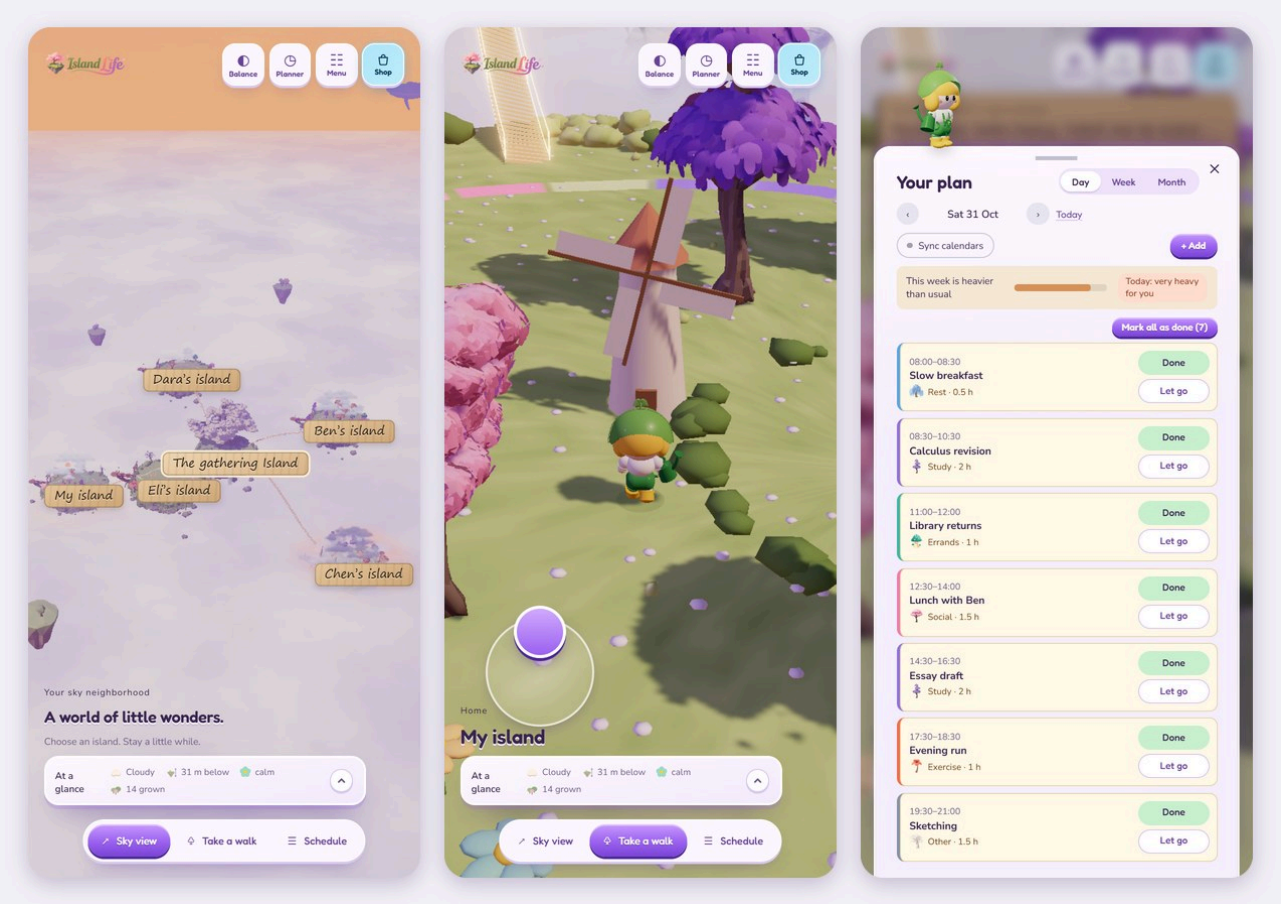

On an iPhone or iPad, web notifications only work once the app has been added to the home screen (Safari → Share → **Add to Home Screen**) and opened from there.

On a phone

The same links work on a phone. The buttons along the top have a word under each icon: **Balance**, **Planner**, **Menu** (the ☷ panel, which also holds sound and the UI size) and **Shop**. On foot, put your thumb down anywhere on the left half of the screen and a joystick appears under it: push to walk, all the way to run. Drag on the right half to look around. **Joystick on the right** in the Menu swaps the two halves. Tap the flower to check in. The app can be added to the home screen from the browser's menu.

A few things are laid out differently on a phone:

- **Cards and questions** (a tree's or path stop's card, a gate sign, Blomy's idea, the fairy, the flower) appear compact at the top of the screen, clear of the joystick.
- **Planner → Day: Synced**, **Sync now** and **+ Add** share one row; each card shows the time, title, kind and length, with **Done** and **Let go** in the same place on every card.
- **Planner → Week:** blocks show their kind icon and name (a long word ends in "…"). Tap a block for its full details and **Edit**; tap empty time to add a block there. Swipe anywhere on the grid to scroll the day; on a phone blocks are moved and resized through **Edit** rather than by dragging.
- **Schedule** (bottom bar) lifts today's path into a timetable that runs top to bottom, 07:00 to 22:00, with each block's time and name beside it. Held sideways, it stays a horizontal strip.

Checklist

Tick each item as you check it.

Demo island (Route A)

- [ ] A heavy timetable lowers the island; a lighter week raises it. *(step 2)*
- [ ] Recent feelings, given to the flower by your gate, influence weather and appear as blooms around her. *(step 3)*
- [ ] Finishing an activity grows its tree, and the fairy's "How draining was it?" answer changes what the island has learned. *(step 4)*
- [ ] The planner supports day, week and month views plus editable, repeating activity blocks. *(step 5)*
- [ ] Balance recommendations and the gardener's offers update the planner in one action, and only after the student chooses. *(step 6)*
- [ ] Friends receive useful wellbeing signals without receiving private calendar details. *(step 7)*
- [ ] Dewdrops reward engagement and can be spent on island decorations and on Blomy's clothes. *(step 8)*
- [ ] The golden window opens for two minutes, and a photo shared inside it hangs in gold on the carousel. *(the tour, or step 7's album)*

Signed-in island (Route B)

- [ ] Signed-in data persists after refresh, subject to a working network connection. *(steps 6–7)*
- [ ] Google Calendar brings classes and plans onto the island, or **Try a sample week** fills a week without it, and **Remove it** takes it off again. *(step 8)*
- [ ] Notifications can be turned on, and "How are you?" asks from the time chosen under **Your sky**. *(Notifications)*
- [ ] A friend can join your sky with your invite link or code, and appears as a new island with its own bridge. *(Invite a friend to your sky)*

Troubleshooting

Problem	Suggested action
A Vercel login page or an old address appears	You have opened an old address. Use https://island-life.onrender.com/, or ask the team for the current public link.
The 3D world loads slowly	Wait up to one minute, close heavy browser tabs, and ensure hardware acceleration is enabled. On a slower device, add `&lite` to the demo address (for example `https://island-life.onrender.com/?enter=demo&lite`).
Sign-in or an external service is unavailable	Continue with the instant demo; the core judging journey does not depend on Supabase, Google or Gemini.
I cannot find "How do you feel?"	It is the flower just inside the gate on **My island**, not a button. She only talks while you are walking on your own island. Walk up to her, tap her, or press `T`.
The flower does not ask	After you answer, she rests for half an hour; her tag says how long. Reloading the demo page starts her fresh.
The fairy did not appear	She waits until any open sheet or dialog is closed, and asks once per finished activity.
The guided tour covers an action	Select **Skip**. To bring it back, open the ☷ **icon** and select **Show the guide again**.
The walking step of the tour does not advance	Click on the 3D scene first, then hold `W A S D` for a second or two.
The tour waits on "Press Share this moment"	Press **Share this moment** and allow the camera, or select **Choose a photo** to use any picture. To leave it out, close the gold banner with ×; the tour moves on.

Problem	Suggested action
The tour waits on "Press Write" at a friend's gate	If you already left that friend a note in this visit, the gate has no **Write** button. Select **Skip**, or reload the page and replay the tour.
Google says "Google hasn't verified this app"	Expected while Google's review is pending. Tap **Advanced**, then **Go to Island Life**. Or skip Google and use **Try a sample week** instead.
No notifications arrive on an iPhone	Add the app to the home screen (Safari → Share → **Add to Home Screen**), open it from there, and turn notifications on again under **Your sky**.
I cannot find "Tune the world"	It is the ☷ **icon** at the top right. Its panel is titled **Make it your evening**, and the demo scenarios are further down under **Try the demo week**.
Sound is unwanted	Turn off **Sound on** in the ☷ **Menu**, or lower its **Music volume** and **Effects volume** sliders. The core experience does not require audio.
Text or buttons look too small or too large	Use the **UI size** slider in the ☷ panel.
A previous demo purchase remains	Open the demo in an incognito/private window for a clean browser state.
A panel fills a mobile screen	Use its × button to close it, or rotate the device to landscape.

The recommended judging route is the demo because it is deterministic, contains no personal information, and remains usable if external services are unavailable.

Report a bug or issue

If something does not work as this guide describes, or you find a bug, please report it as a **GitHub issue**:

1. Open github.com/25006675-png/Island_life/issues. You need to be signed in to GitHub to post.
2. Check whether someone has already reported the same problem. If so, add a comment there instead.
3. Otherwise select **New issue** and describe what happened.

It helps us fix it quickly if you include:

- **Route:** the demo island (Route A) or a signed-in island (Route B), and the step in this guide.
- **Device and browser:** for example "Windows laptop, Chrome 130" or "iPhone 15, Safari".
- **What you did:** the steps, in order, that led to the problem.
- **What you expected**, and **what happened instead**, including any message on screen.
- **A screenshot or short screen recording**, if you can.

Please don't include passwords or other personal information in an issue; issues on this repository are public.
